NEWS RELEASE

KEX2007-23

Flagstaff, WA Property Diamond Drill Program Commences

Kent Exploration Inc (“the Company”) reports that a diamond drill program has commenced on its 100% optioned Flagstaff property, which is highly prospective for gold and silver mineralization, and which is located approximately 10 miles west of Northport WA, and 15 miles southwest of Rossland, BC.

The drill program is to follow up CE Minerals (“CE”) drill holes CE 54D, CE 50, and CE 52A, where CE reportedly intersected gold mineralization during an approximate 19,000 foot, 203 hole, rotary air blast drill program undertaken in 1981 while defining a historically estimated 1,300,000 ton barite deposit.

Upon completion of this phase of drilling on the Flagstaff property, the diamond drill rig will be returned to the Company’s 100% optioned, all-weather accessible, Rosebud property in northern Arizona, where diamond drilling to substantiate the historic gold grades on the property will continue during the winter months.

Note – The CE Minerals information presented herein has not been verified by the Company, is not NI-43-101-compliant, and as such should not be relied upon.

Kent Exploration Inc is a junior exploration company that has earned a 50% interest in the Ivanhoe Creek property, a Midas-style target in Nevada’s Carlin Trend, has a 100% interest in a mining lease option on a gold/silver/barite prospect in eastern Washington state, and is earning a 100% interest in the Rosebud property, a gold/silver prospect in northern Arizona.

This News Release has been prepared on behalf of the Kent Exploration Inc Board of Directors, which accepts full responsibility for its contents. Marvin A. Mitchell, a director of the Company and a qualified person as defined by National Instrument 43-101, has reviewed and approved the contents of this news release.
